

## ESRC PhD Opportunities in Demography & Reproductive Health at LSHTM

ESRC-funded PhD scholarships are available at the London School of Hygiene and Tropical Medicine, to start in autumn 2020. These are available in several disciplinary 'pathways', including the Demography pathway, which welcomes any topic from excellent candidates in the fields of demography or reproductive and sexual health. In the first instance, please contact a potential supervisor, including a CV and a description of research interests. The websites of the Population Studies Group (<https://psg.lshtm.ac.uk/>) and MARCH (Centre for Maternal, Adolescent, Reproductive and Child Health: <http://march.lshtm.ac.uk/>) have lists of staff who could potentially supervise projects, with their research interests.

As part of their scholarship, students may spend a year at the European Doctoral School of Demography: <https://www.eds-demography.org/>. We also welcome applications from students interested in using Advanced Quantitative Methods (AQM).

Full ESRC awards (tuition fees + stipend) are available to UK residents; other EU nationals may receive awards which cover tuition fees only. However, all nationalities, including international students, are eligible for full awards (tuition + stipend) if they use Advanced Quantitative Methods (AQM).

The closing date for preliminary applications is 6 January 2020.

For further details, and application forms, see the UBEL Doctoral Training Partnership website:
